

2400 – Python Project Foundation: How to Complete the Course

Welcome to **2400 – Python Project Foundation**!

Please follow the course in order, starting from **Lesson 1 through Lesson 10**. Each lesson is designed to build on the concepts from the previous lesson, so we strongly recommend that you do not skip ahead.

How to Complete Each Lesson

For every lesson, please follow these steps:

1. Read the Class Notes

- Open the PDF file under **ClassNotes**.
- Review the concepts, examples, and exercises included in the notes.

2. Watch the Lesson Recording

- Open the video under **Lesson Recordings**.
- The instructor will walk through the class notes, explain important Python concepts, demonstrate examples, and guide you through the exercises.

3. Complete the Exercises

- Work through the exercises for the lesson yourself.
- Try to solve each problem before looking at the provided solutions.

4. Complete the Quiz

- Take the quiz for each lesson to check your understanding of the concepts.

5. Complete the Homework

- Finish the homework assignments for each lesson.
- The exercises and homework are an important part of developing your Python programming skills.

Exercise and Homework Solutions

Exercise solutions, homework solutions, and solution videos are provided in each lesson.

Please use these materials as **references after you have attempted the problems yourself**. You will learn much more by trying to solve the problems first and then comparing your work with the provided solutions.

You are encouraged to submit your **exercise solutions and homework solutions**, but submission is **not required**.

Lesson 10 – Final Exam

Lesson 10 includes the **Final Exam**, and **every student is required to complete it**.

If you receive a final exam score of **80% or higher**, you have demonstrated that you have mastered the basic foundations of Python programming and are ready to continue to the **Data Science Bootcamp**.

The most important goal is not simply to finish the lessons, but to make sure you understand the concepts and can write Python programs independently.

If you have any questions while taking the course, please contact us at:

ameriduo@gmail.com

We hope you enjoy learning Python and building a strong foundation for your future AI, Data Science, and programming projects!
